For the attention of Colonel Hiram T. Doodlebug III – Senior Vice President

Dear Hiram,

**Three Kings Project, Wooton under Edge**

I refer to our telephone conference earlier today. I feel that I must express in writing my deepest concern over the design of the apex connection No. 27 which was submitted to us by Sleighbells last week.

As I told you this welded connection simply will not take the forces to which it will be subjected, as calculated by us and provided to you through Lapland. We have rechecked our forces' calculations and find them correct. We ~~fear~~ advise therefore that unless ~~the~~ that particular connection ~~and adjoining steelwork~~ is massively strengthened it will lead to a catastrophic collapse in the roof of the building as it will initiate a progressive collapse of the remaining trusses.

We would strenuously urge you to review and upgrade your design of this connection.

Yours sincerely,

**Theo Delight**  
**Managing Partner**
